

Penelopes

Penelopes may be a small book of mine, it will treat about my www.eva9000.com website!

Of course I won't stay to talk about the obvious like the www main folder files like index.html home or about.html, but just about two folders and consequently sub-folders contained in the main or www or public HTML.

These folders or, technically, sub-folders because it is www the main folder, will explain the basic design of a simple blog and a filesearch in this case audio files.

The two projects are entirely made with PHP 5.6 and MYSQL, so, maybe someone may find obsolete, however it is a good practice falling backwards sometimes!

The only way to find the truth absolute is in the search and change of the past rather than worrying about the future!

However you can find the running live samples of these two programs here:

[Blog Project](#)

[Deadbunny Project](#)

Now, since www.eva9000.com website has been updated to new code, the above program may appear styleless or something, however when you're gonna test the programs locally they would shape according to my style.css design or 2015-2017 www.eva9000.com look! I think! Just kidding!

Blog Project:

Now the design of [Eva9000.com](http://www.eva9000.com) Blog Project folder is composed by the following path <http://www.eva9000.com/post/> and subfolder <http://www.eva9000.com/post/avatar> and incrementing numbered avatar folders such as avatar1, avatar2, avatar3, avatar4 an so on.

Here it is how it looks the www main folder.

Database Design:

Here it is the Mysql database design for the Blog Project:

Database `blog_db`

Table structure for table `blog_posts`

Column	Type	Null	Default
<code>id</code>	<code>int(11)</code>	No	
<code>email</code>	<code>varchar(255)</code>	No	
<code>post</code>	<code>text</code>	No	
<code>date_posted</code>	<code>varchar(255)</code>	No	
<code>password</code>	<code>varchar(50)</code>	No	
<code>avatar</code>	<code>varchar(255)</code>	No	
<code>like</code>	<code>varchar(255)</code>	No	
<code>image</code>	<code>varchar(255)</code>	No	
<code>title</code>	<code>varchar(255)</code>	No	

Dumping data for table `blog_posts`

<code>id</code>	<code>email</code>	<code>post</code>	<code>date_posted</code>	<code>password</code>	<code>avatar</code>	<code>like</code>	<code>image</code>	<code>title</code>

Anyway,
my

not due
all to

them
all,
but
with my
umbrell
as they
can
afford
anywher
e, I
think,
or
perhaps
, so
far,
for a
little
while!
I hope
I don't
need to
tell
the
story
of my
life in
here,
well,
you can
always
read my

if you
want
to, so
let's

get

In this sub-subfolder, it's contained the album files which display the album, now, it happened that, that 8 years old kid took the wrong curve because it had to solve it in an automation,, however, the program is valid and beautifully working. So, this is the sub-subfolder 6_minutes which run the relative album, so imagine 40 albums it means 40 sub-foler in the deadbunny/albums/ folder! Kind of peachy, even if a clean, neat and repetitively comfortable way!

Despite this folder is optional because all the operations can be done by PhpAdmyn and webserver cPanel, it is good practice developing time after time and improving the knowledge behind the one and only MySQL Graphic User Interface. However this is the DeadBunny Project Audio files management control panel, which inspired other application of mine.

Well, I guess this is it! Anyway, you can download this program, even if just a small sample, in the sense that many repetitive files, such as teh albums and other were outside the scope of this book.

So, the project of the entire www.eva9000.com 2015-2017 website can be downloaded here ...

<http://eva9000.com/software/penelopes.zip>

www.eva9000.com 2015-2017 Cascade Style Sheet:

Despite this kind of file as teh images often it's good to put in subfolders even if sounds stupid, you know an extra ... It is not really necessary cause evey page inked to a css file can be downlloaded with the style, well, it's part of the book!

Path: /style.css
